

Sprint #1 Report  
Crowdsourced Anonymity  
Crowdsourced Anonymity  
July 8, 2019

Actions to stop doing:

We need to stop the lack of communication between group members and stop procrastinating on tasks. This is important because communication is key when working in teams. Without proper communication, information is lost and group members will not fully understand what has been successfully accomplished, what has changed, and what still needs to be done. Procrastination is also unfavorable because procrastination tends to lead to negligence in quality of code and thorough planning.

Actions to start doing:

We need to start communicating more effectively and more often. There are days where we do not talk about the level of progress we made on our project and our individual tasks which, in turn, can hinder us from working at our full potential and deploying a working product. We should also hold more online Scrum meetings so that the entire group has an understanding of what needs to be done, what has been done, and what issues each of us are potentially facing in our tasks. Furthermore, the group should start working on the project a bit more every day, as it seems we are somewhat putting important stuff off until the last minute.

Actions to keep doing:

For the code we are writing, it seems to be working and we are able to get visible output from it. We have completed all the tasks required for Sprint 1 as well, so we are on track. We need to keep asking questions. Asking questions has helped all of us understand the project and our individual tasks better. We are able to see the bigger picture and how our individual contributions are working to make the product a well developed software.

Work completed/Not completed:

We completed a TCP server, a database table for the users, and a CSV parser as well as a website ban feature. We finished all the tasks required from Sprint 1.

Work completion rate:

We were able to finish 4 user stories during the Sprint. Our group spent about 15 ideal hours estimated getting all four of these items to work over the course of 7 days. The final burn up sprint burnup chart can be seen below:
